PAM (RADIO & TELEVISION) LTD.

295 Regent Street, London, W.1

In keeping with the emphasis always placed on design, good workmanship and reliability, the range of Radios and Televisions shown on Stand 6 at this year's Radio Show lives up to the high standard one expects from the PAM trade mark.

This enterprising company have, over the course of the past years, established themselves as one of the most distinguished manufacturers of both Radio and Television receivers.

Pioneers in Great Britain of the first fully transistorised Portable radio, printed circuit television and Polaroid filtered screens, Pam again take the lead by producing in their new range, sets complete with the U.H.F. Tuner, so that all new 625 line transmissions can be received on any Pam luxury set without the bother of fitting tuners and resetting.

Most new Pam sets are *complete*, just click the switch and both programmes are instantly available, either 405 line or the new 625 line, the choice is yours.

Radio receivers, all transistor, are a special feature this year, ranging from the large transistorised Table radios, to miniature vest pocket Portables. All the new radios are fitted with *Peak Performance Control* (P.P.C.) giving much longer battery life with constant performance.

A complete range of export receivers are shown in Demonstration Room X4. These sets, both radio and television, are designed and tropicalised to suit most parts of the world.

Brief details of models on view are listed hereunder:

### EXPORT RECEIVERS (Demonstration Room X4)

#### RADIOS

- TXP175 Four waveband, seven transistor, printed circuit chassis.
